

HEMORRHAGE CONTROL

The Performer Course for health workers and volunteers is part of the training for emergency personnel, organized and promoted by NRC.

Course objectives

Following any type of trauma, the victim can die from uncontrolled massive bleeding in 5 to 10 minutes. The course on Hemorrhage Control follows the indications provided by the organization Bleeding Control, under the aegis of the American College of Surgeons as a result of the Hartford Consensus, i.e. the social security policies launched by the Obama administration to deal with acts of terrorism and public violence. The course aims to teach the population the techniques to manage a massive haemorrhage and rescue the victim, while waiting for qualified rescue.

The course focuses on:

The immediate response to bleeding.

The recognition of life-threatening bleeding.

Effective methods to stop bleeding.

All non-medical rescuers and all bystanders, as they have learned the basic maneuvers for cardiopulmonary resuscitation to date, it is also necessary that they learn the techniques for controlling massive bleeding in the limbs, caused by work, sports, hunting accidents, or by violent and premeditated acts, such as terrorist actions or carried out by unstable and violent people. The help given by a civilian non-medical rescuer can often mean the difference between a person's life and death, even before qualified help arrives.

With the right training, you can save lives!

During the course, lasting at least 4 hours, the participant will learn to use the different techniques for bleeding control, such as direct pressure, the use of hemostatic agents and tourniquets, which represent the cornerstone of the management of haemorrhages in military and civil rescue.

Recipients of the course

Civilians, Doctors, nurses, rescue drivers, rescuers, law enforcement, military, security operators, security guards, private investigators, students.

Instructors

The course is carried out by experienced medical and nursing staff operating within the 118 Out-of-Hospital Emergency System, who have also obtained the qualification of Instructor for the American College of Surgeons Committee on Trauma Bleeding Control.

Participant/instructor ratio

6:1

NRC Teaching Methodology

The course is structured in a theoretical part and a practical part of training with interaction in small groups.

Full course duration

Level 1 4 hours

Level 2 8 hours

Duration of the retraining course

2-4 hours

Certification

Attending the course and passing the final assessment allow you to obtain an NRC certification valid for 24 months (2 years). It is mandatory to carry out an intermediate update at the end of the 12 months (1 year)

To renew the certification and maintain the skills and competencies, it is necessary to take a retraining course.

It is possible to access a retraining course within **3 months** from the expiry date of the entire course; this does not entail an extension of the initial validity, but simply facilitates the admission of learners to the retraining course, making the period that allows access to the course longer.

Passing the retraining course extends the validity of the certificate for another 24 months.

Opportunities for advancement in the training course

Candidates, who have demonstrated practical skills, adequate theoretical knowledge and communicative-relational skills (criteria listed and specified in the "Potential Instructor Application Form") can be candidates as Potential Instructors.

Important notice:

The LTC NRC secretariat is required to send each learner a WELCOME LETTER containing the credentials to access the reserved area and the code to purchase an original copy of the manual.
